

Event Class Merge

Clean up your ProLaw Events tree — safely and in seconds.

Over time, ProLaw databases accumulate duplicate and fragmented Event Classes — retired names, inconsistent assignments, clutter that makes the Events tree harder to navigate and trust. Cleaning it up manually is risky. The ProLaw schema is complex, and one wrong move can break the Events tree across your matters. **Event Class Merge** takes care of it safely, completely, and in seconds.

THE PROBLEM

Event Class Sprawl

Duplicate Classes	Multiple names for the same thing confuse staff and fragment reporting.
Retired Classes	Old classes linger in the system long after they should have been removed.
Broken Folders	Manual cleanup risks orphaned folders and missing events in the tree.

WHO IT'S FOR

Built for ProLaw Administrators

Law Firms	IT and admin staff tired of navigating a cluttered Events tree.
Corporate Legal	In-house teams consolidating event categories after restructuring.
Government Legal	Offices enforcing standardized event classification across matters.

KEY FEATURES

What You Get

Consolidate in One Command

Merge multiple source Event Classes into a single target. Every related record — events, folders, and optionally event types — is updated consistently in one operation.

Transactional Safety

The entire merge runs inside a database transaction. If anything unexpected happens, it rolls back automatically and leaves your data exactly as it was. Zero risk.

Complete Folder Cleanup

Event Class folders are re-pointed to the target class, new folders are created where needed, and orphaned source folders are removed. The Events tree stays clean.

Instant Results

A merge that would take hours of careful manual work across multiple ProLaw screens runs in a single command — typically finishing in under a second.
